Receivers

Receivers are built into the thermostats for the Series 8 and Series 14 E4E-GB heaters. For the control of other equipment and appliances a variety of other receivers are available.

The receivers can be fitted into heaters, in electrical outlets or in a consumer unit. Each receiver has a unique code that directs signals to transmit precisely to the relevant electrical appliance.

RDC 700 Receiver

Dual electronic thermostat with built in receiver for the Orion 700 Multi zone digital RF controller, temperatures from 5°C to 30°C.

RS 700 Receiver

For control of small appliances of up to 13 amps, typically towel rails.

RSX 700 Receiver

For control of fixed appliances of up to 16 amps. DIN rail mounting, typically for hot water.

RCE 700 Receiver

For control of table lights and portable appliances.
