

## KORADO TOWEL RAIL RANGE

### Versatile design options for the modern bathroom.

The Korado range of towel rails offers the designer and specifier useful options when creating the modern bathroom environment.

They can be positioned against a wall or alternatively at right angles to create a visual divide between bathroom furniture.

Manufactured to quality standards and processes the Korado range acts as both towel rail and increasingly as the main source of heating for the bathroom.

The Korado is supplied by NOBO Heating in outputs from 200 watt to 600 watt.

All Korado heaters are produced from high grade materials and finished in elegant white.

This range of heater from NOBO Heating compliments the full range of towel rails available from the company providing the specifier with a complete solution for the bathroom environment.
